Poster Peer Review

Peer Reviewer Name: _____

Presenter Name: _____

Is the description of the study methods and measures clear? Based on this description, can you easily interpret estimates from the regression models? Is it clear what a one-unit difference in each measure might mean?

Is the statistical model which is tested clear, based on either a visual representation, equations, or verbal description of the model? Can you tell which paths are moderated and which paths are not?

Is there clear correspondence between the research question, model tested, and conclusions (including statistical controls)?

Are the visualizations used appropriate and informative? Are there other visualizations which could have been more helpful, or changes to the current visualizations which would make them more clear?

Are the limitations of causal inference clearly identified? Are there any additional limitations to causal inference which should be included?
